**Who we are**

**GLOBALWA**

Global Washington supports the global development community in Washington state that is working to create a healthier and more equitable world. We promote our members, bring them together to spark new ideas and partnerships, and build a network of leaders improving lives around the world. We aim to change the world for the better by strengthening Washington state's vibrant global development community and increasing the impact of our members to improve lives in developing countries.

With over 160 members, including some of the world's most respected companies, non-profit organizations, academic institutions, and foundations, Global Washington provides a platform to share knowledge, partner, and overcome challenges. We are building a dynamic network of stakeholders from which to draw expertise, exchange ideas, and form innovative collaborations.

**SEATTLE FOUNDATION**

Seattle Foundation ignites powerful, rewarding philanthropy to make Greater Seattle a stronger, more vibrant community for all. Focused on creating equity and opportunity, our goal as a community foundation is to simplify giving and strengthen the impact of philanthropy for the more than 1,200 individuals, families, businesses, and non-profits we serve. We provide deep community insights, powerful civic leadership, effective philanthropic advising and judicious stewardship of assets in support of our mission. As the community's foundation, we appreciate and value the broad range of definitions our philanthropists hold for the word “community.” From those who choose to work very locally, to others who see themselves as citizens of the world, Seattle Foundation supports strategic investment in the places our philanthropists prioritize.

Seattle Foundation works with partners to provide effective advising, education and experiential learning for our philanthropists interested in making a difference around the world. The Foundation is proud to be one of the largest grantmakers in the U.S. to global causes and organizations.

Welcome to the 2020 Global Philanthropy Guide

Perhaps you already have a vision for how you want to make the world a better place. Maybe the picture in your mind is a little blurry or maybe it’s as clear as Mt. Rainier on a sunny day. Whether you are just beginning to explore global issues or if you are expanding your global giving, our Global Philanthropy Guide is a resource to support you on your journey. It can help you sharpen your ideas about international giving and provide opportunities to engage with local non-profits doing incredible work around the world.

For the last five years, Global Washington and Seattle Foundation have worked together to develop and produce this annual guide. Global Washington is a member association for organizations with ties to Washington state that are working to improve lives in developing countries. Seattle Foundation is the largest community foundation in the Pacific Northwest. It collaborates with philanthropists who invest in both their local and their global communities—and their collective passion for global causes makes the foundation one of the largest U.S. grantmakers to organizations working abroad.

The feature articles in this year’s guide highlight Global Washington members and their efforts to advance the United Nations’ Sustainable Development Goals, which together form a blueprint for achieving a better, more sustainable future for all. The articles also reflect priority areas that the Global Washington community is tackling jointly, including good health and well-being, quality education, gender equity, human rights, food security, and emergency relief. Toward the back, you’ll also find a full directory of Global Washington’s more than 160 members, a handy reference that can lead you to learn more about familiar organizations and discover new ones.

On behalf of Global Washington and Seattle Foundation, we thank you for your partnership and commitment to making the world a more equitable, healthy and prosperous place for all.

Kristen Dailey
Executive Director
Global Washington

Fidelma McGinn
Chief Philanthropy Officer
Seattle Foundation
A young boy and girl learn in a buildOn primary school in Mpeka, Malawi. The school is a partnership between buildOn and the community. To construct this school buildOn contributed the engineering, materials and skilled labor, while the community of Mpeka provided the land, local materials, and the weeks of volunteer labor to build the school.

The Global Washington community supports the United Nations Sustainable Development Goals (SDGs), a blueprint for building a better and more sustainable future for us all. The following articles, previously published by Global Washington, represent the work that Washington state organizations are doing to achieve the SDGs, including responding to the immediate needs of vulnerable communities in developing countries, and working towards lasting change.

1. No Poverty
2. Zero Hunger
3. Good Health and Well-Being
4. Quality Education
5. Gender Equality
6. Clean Water and Sanitation
7. Affordable and Clean Energy
8. Decent Work and Economic Growth
9. Industry, Innovation, and Infrastructure
10. Reduced Inequalities
11. Sustainable Cities and Communities
12. Responsible Consumption and Production
13. Climate Action
14. Life Below Water
15. Life on Land
16. Peace, Justice, and Strong Institutions
17. Partnerships for the Goals
Randi Hedin, a director on buildOn’s National Board of Directors, remembers staying in a remote village in Senegal in 2013. The village was in the midst of a desert-like environment with little vegetation around. The schoolhouse was a small hut made of millet. It was very dark inside the classroom with no windows, so teachers often took their students outside to the few available trees to learn with light and shade.

One morning, Hedin came upon some cows munching on the school. She was surprised and snapped a few pictures. She asked her host family about it later.

“They said, ‘Yeah, between the animals and the rains that come during the rainy season, this is the problem they have with their school,’” Hedin recalls.

This is where Hedin’s work with buildOn comes in. Hedin was in Senegal because the non-profit was building a new school in the village, one that would not have to be rebuilt after every rainy season or every time a cow got hungry.

buildOn works in seven countries around the world, as well as in the U.S., to build schools in collaboration and coordination with the local ministries of education and community leaders. So far, the organization has built 1,323 schools internationally. For Hedin, the work buildOn does aligns with her belief that education is the foundation for opportunity.

“Kids miss school if something happens with the school that they can’t get their lessons,” Hedin says. “So for example, the Haitian community I was in was so excited about having this brand new building dedicated to the kids, that it’s a school, not a community center or a church or a meeting place, it’s first and foremost a school.”

Hedin joined the national board of buildOn in 2009. She first heard about the organization a decade earlier when she was living and working in the New York City-area as a securities and corporate law attorney. Her firm had a table at the buildOn annual gala, where she heard Jim Ziolkowski, buildOn’s president and CEO, speak for the first time. She said he was, and still is, a mesmerizing storyteller—and she knew she wanted to get involved eventually.

“Much later on, I started to really learn about the depths of poverty in many of these countries around the world,” she says.

She thought at the time, “If I ever in my life have time to get involved with this organization, I would love to be a part of the solution because education transforms lives, and it sounds a little hokey, but you see it here in the U.S. and you see it everywhere around the world,” she says.

In 2008, Hedin and her family moved to the Seattle area, opting for a change of pace from the East Coast. Hedin left her corporate job and now is co-president of RPX Research, as well as a lecturer in the University of Washington Law School’s Sustainable International Development program. Joining the buildOn board pushed Hedin to use her law background to better understand the challenges the organization faces in different countries. In fact, before she started lecturing, she went back to school to get her master’s degree in the Sustainable International Development program.

“My knowledge of the world and my knowledge of outside our Western world has exponentially increased, and I think that buildOn has much to do with that,” she says.

As a board member, she has traveled to all seven countries (Senegal, Malawi, Mali, Burkina Faso, Nepal, Haiti and Nicaragua) that buildOn has schools in globally. Hedin really believes that the buildOn model of community engagement sets it apart from other organizations. The non-profit does a good job avoiding “mission creep,” Hedin says, by solely focusing on building physical schools (usually with latrines) for communities.
When buildOn enters a community—usually in a rural part of the country—its staff establishes a partnership between the country’s ministry of education, the community itself and buildOn. The ministry of education supplies the books, curriculum, teachers and desks for the classroom, and local community members are responsible for providing some of the locally-sourced materials needed to build the school, such as water and gravel, supplying non-skilled volunteers to help build the school, and electing a leadership team of equal numbers of men and women to oversee the school construction.

buildOn is really there to create structure in the community and provide the monetary resources and certain supplies to build the physical school. One requirement of each leadership team and school that the non-profit builds is that it must include equal numbers of men and women, boys and girls.

“In many of these places where we build, women don’t have, necessarily, decision-making power, and here on these committees they do. It’s a game-changer,” Hedin says.

In some of its countries, buildOn also pays for an instructor to teach adult literacy classes at night in their schools. Hedin remembers one woman, the wife of the local principal in a community in Malawi, who was excited about the opportunities for her children and for herself to be able to learn marketing and negotiation skills.

“She really wanted to make sure that her girls, as well as her boys, had a good school, too, so that they could have a better life than she has,” Hedin recalls. buildOn also hires local men and women in each country to work for the organization.

Hedin, who lives in Woodinville with her husband, envisions taking her law background, as well as her master’s degree, and getting more deeply involved with buildOn’s work, along with other projects. She currently does fundraising for the organization in Seattle, as well as some governance work. In the last decade fundraising in Seattle enabled buildOn to build nearly 20 schools, Hedin says. buildOn is a 27-year-old organization, and Hedin said she believes that they do not plan to expand to other countries right now—opting instead to go deeper in the countries they are in, continuing to build more schools.

“We really are getting to as many communities as we possibly can, and I like that because I think that’s when you’re going to see literacy rates rise,” Hedin says. “You are going to see growth in economic development and see all those things that come as a result of education that will improve for those countries.”

The countries buildOn works in rank low on the Human Development Index, and ultimately, the goal would be for buildOn to have raised literacy rates in those countries and not need to build any more schools.

“That could be a great goal—to move on to other countries where the needs remain and are the greatest,” Hedin says.
GOALMAKER CARE

CARE food security interventions center on women

By Arielle Dreher

World hunger is on the rise again, despite quantifiable efforts in the last decade to stem the increase of undernourished people worldwide. The Food and Agriculture Organization of the United Nations estimates that nearly 821 million people face chronic food deprivation today.

In Africa and South America specifically, hunger and food insecurity is getting worse, UN statistics show, due to conflicts, changing weather and economies slowing down. When people cannot access food, the chances of malnutrition heighten, too, compounding the problem. If this trajectory is not reversed, the world will not meet the UN Sustainable Development Goal of eradicating hunger by 2030.

CARE, a global non-profit organization, is working to stop hunger worldwide and reverse the rising tide of food insecurity. CARE works in 94 countries around the world in not only food security but also health, education and disaster relief.

Like most global humanitarian agencies, CARE employs predominantly local people to implement programs and initiatives where it works, predominantly in the global south, in west and east Africa, southeast Asia, and parts of central and South America. Country offices range in size depending on need, and focus on ways to systemically eliminate food insecurity and malnutrition, sometimes by influencing a country’s policies, other times by working directly with community organization on the ground.

While the majority of CARE’s work is done in the global south, it also employs staff in Europe and North America to fundraise and advocate for advancing women’s empowerment and fighting hunger globally.

WOMEN AT THE CENTER

CARE’s model of intervention revolves around empowering women, specifically ensuring they have access to and control over the resources necessary to improve their lives and those of their families, according to Juan Echanove, senior director of food and nutrition security at CARE USA.

Twenty years ago in Niger, CARE started a program that helped women take control of their finances and products. The organization helped establish a village savings and loan association that enabled women to share money and invest amongst themselves. Today, 20 million women across the world are a part of these types of associations.

“They’re not only allowing women to have savings, but more importantly they create a safe space for them to meet and gather, which triggers other processes,” Echanove said. “We are talking about contexts where women very often don’t have the possibility to undertake their own economic activities, so they lend from each other with the support from CARE. This is having an impact at the community level in many parts of the world.”

In Bangladesh, CARE started a program called “Nutrition at the Center” to help local women share information and ideally change attitudes towards nutrition and health outcomes for pregnant women and young mothers in rural areas. CARE also helps women access the resources—like land and finances—to grow food around the world.

Worldwide, women make up about half of all farm laborers, but they often cannot access the resources to financially benefit from or grow their own crops. CARE works to increase equality for women in societies by initiating gender dialogues in communities to engage leaders to increase women’s empowerment.

“We have realized, based on several programs we’re developing and research by many others, that by empowering women, we can really (start to see) a more fair and just society, where there is more wealth for everyone,” Echanove says.

ADDRESSING CLIMATE CHANGE

In recent years, CARE’s work has had to address how climate change is affecting farmers and food production all over the global south. There is a strong link between food security and climate change, and the changing climate is at least partly to blame for the forecasted growth in hunger worldwide. Changing weather patterns are affecting food viability in places like Africa, Echanove said, and when farmers struggle to grow the food that’s needed, prices skyrocket.

“You can have the food, but if no one can pay for it then you’re in trouble,” Echanove said.

In already poor communities, climate change can literally translate to starvation for some people. CARE is working to help countries adapt to climate change by creating community-based adaptation plans, and helping farmers prepare for less water by introducing water-smart agricultural techniques. CARE’s other work to tackle climate change involves educating governments and partners in the global north.
“This climate change is so unfair. We cause it—we America, Japan, Europe, China—we are polluting the world and causing this, but this is felt equally across the world,” Echanove said. “…They are getting less crops because of something we are doing, so this is a powerful message that we need to share.”

Beyond lowering emissions, farmers in the global south could use financial support from the global north.

**LOOKING AHEAD**

While the organization already works in improving the food security and nutrition of 20 million people worldwide, CARE leaders set an ambitious goal to more than double the annual reach to 50 million people by 2020. To get there, Echanove said the non-profit will need to extend its impact in the countries it works in, as well as expand its fundraising and partnership efforts.

CARE is also spreading the conversation of climate change and how it impacts farming and hunger across the globe. CARE recently brought together farmers from the U.S. South to meet with farmers in Cote d’Ivoire (Ivory Coast) to exchange ideas and techniques they use in small-scale farming. The problems, Echanove said, were the same.

“We are exploring further what we can do to share more. We believe that some of the tools we are promoting in Africa and other parts of the world can be useful for the people working to promote food justice in the U.S.,” he said.

Rabeya, 31, is a mother of two and successful potato and pumpkin farmer. Before she used to grow rice, but her crops became damaged by increasingly frequent floods. “The floods used to come only once a year, now they come twice a year and we don’t know when they will come,” Rabeya says. Rabeya is part of a project set up by CARE to help vulnerable women prepare for the recurring and escalating climate disasters in her area. Women learn about flood tolerant crops and alternatives to rice, which is vulnerable to flooding. Rabeya is now growing potatoes and pumpkins for a profit.

The non-profit relies on funding from the global north to help programmatic and strategic efforts all around the world. CARE receives funding from donors as well as governments, including the U.S. government. When projecting where the organization will be in 10 years’ time, Echanove said a lot will depend on investment from the global north.

“Investing in development is investing in our global joint future,” Echanove said. “...A lot will depend on what we will do as citizens in terms of getting to a better place in 10 years from now—or not a very nice place.”
Every Woman Treaty
Could a new global treaty end violence against women and girls?

By Joanne Lu

What would happen if every country in the world were legally bound by a comprehensive international treaty against all forms of violence against women and girls? The Every Woman Treaty intends to find out.

The project was launched in 2013 under the name “Everywoman Everywhere” by a global group of women’s rights activists, who determined that there is a large gap in international law regarding the protection of women and girls.

Certainly, the United Nations’ (UN) 1979 Convention on the Elimination of All Forms of Discrimination Against Women, 1993 Declaration on the Elimination of Violence Against Women and 2000 Convention against Transnational Organized Crime have all pushed the conversation forward in important and significant ways. But amid the limitations of those existing declarations and conventions, the group saw the urgent need for a legally binding global treaty that holds countries accountable for all forms of violence against women.

Since its launch, the effort has blossomed in a very grassroots fashion into a coalition of more than 1,700 women’s rights advocates and experts, including 840 organizations, in 128 countries.

“I was sold straight away,” says Laurie Tannous, who joined Every Woman Treaty’s Global Working Group in 2016 and serves on their special expert committee on human trafficking. At the time, Tannous—an international business and Canadian immigration attorney—was attending conferences and giving speeches on trafficking, when a new friend introduced her to the Treaty.

“A treaty is a call to action—a collective one. And if you have this collective international voice being driven by one document, it keeps things very efficient and powerful,” says Tannous.

Tannous says that when she first got involved, trafficking and modern slavery weren’t yet a major part of the Treaty. Although she is, of course, opposed to violence against women and girls, her work centers on preventing women, children and even men from being smuggled across borders and enslaved.

The group responded to her concerns with what she now recognizes as their emblematic commitment to inclusivity: “Let’s include that, too.”

Today, the group has drafted a “zero draft” or core platform—the framework nations will use to draft the official treaty. The draft has been sent to 2,000 experts for peer-review, and it addresses all types of violence against women, including domestic violence, non-state torture, state-sponsored violence, and workplace violence, as well as trafficking and slavery. It also considers four groups of vulnerable women and girls, three life stages (girls and students, older women and widows of all ages) and specific actionable recommendations for preventing, suppressing and punishing violence against women and girls, including trafficking in persons.

For example, some countries still punish survivors and victims of trafficking and slavery (like sex slaves who are punished for prostitution). This discourages victims from reporting incidents of trafficking, which is absolutely necessary data if countries and municipalities are to work toward eradicating it. The group is aiming for a treaty that prohibits the punishment of survivors and victims, with the hope that in doing so, they would feel safer telling their schools, neighbors, police officers or nurses about the crimes that had been committed against them. Increasing this first level of reporting is a critical first step in tackling the problem.

But in addition to laying out enforceable protocols, Tannous says the goal is also to increase awareness, outreach, and education of the issues and promote effective strategies for eradicating them. For example, the special expert committee on human trafficking identified a huge gap in countries’ understanding of the definition of trafficking. A “lack of clarity in definitions leads to problems in prosecuting violations,” they wrote in their policy memo. In this way, Tannous says, the Treaty is meant to enhance existing UN conventions.

“We can create law all day long, but if it’s not enforced, if it’s not adopted, if it’s not supported, if it’s not talked about—it’s as good as the paper it’s written on, and nothing more,” says Tannous.

Since its launch, Every Woman Treaty has blossomed into a coalition of more than 1,700 women’s rights advocates and experts, including 840 organizations in 128 countries.
At the moment, the Treaty is still in development, as experts review the draft and leaders of the group meet with potential “lead nations,” who will commit to signing the Treaty and serve as its ambassadors. These lead nations will be the ones who bring the Treaty to the UN for adoption by all member states.

The challenge moving forward, according to Tannous, is getting countries to understand that a global treaty to prevent violence against women and girls is not redundant, but rather is a necessary step to closing loopholes in existing international laws and instruments. But once that is clear, she believes the grassroots commitment that launched this effort to begin with will be the same force that keeps the momentum going.

“Just look at the sheer number of women who have taken their own time to contribute to this effort,” she says. “None of us get paid for this, but we’re so personally vested in it that I think everyone intends to see it through—that OK’s mean action.”

If countries translate their commitments into action, then the Treaty could become the catalyst for a historical change in global norms, the group says. Consider the Tobacco Treaty, which ended smoking on airplanes and in many public spaces. Indeed, with enough action, a treaty to end violence against women and girls could end not only the trafficking of women, but all forms of violence against women and girls. Now, wouldn’t that be a treaty for every woman everywhere.
A thoughtful model and a little bit of encouragement is sometimes all that is needed to empower women in potentially intimidating workspaces. Or at least for Fabiola, this was the case.

Fabiola worked at a vegetable greenhouse in Sonora in northern Mexico when the farm decided to become Fair Trade certified. Fabiola, one of thousands of workers, was elected to be a representative on her farm’s Fair Trade Committee. She was shy and hesitated to speak in front of others. As a part of the committee, she received training and learned how to negotiate and represent her fellow co-workers’ concerns.

Nathalie Marin-Gest, Fair Trade USA Senior Director of Produce & Floral, visited Fabiola’s farm a year after she was elected to the committee. Fabiola had embraced her new role whole-heartedly. Marin-Gest said Fabiola was firing a construction manager who was not doing a good job and hosting meetings with thousands of workers with ease. She was emboldened by being on the committee and learning how the farm production process worked. She was advocating for workers and communicating with suppliers regularly. “I’d never spoken up in public—I was terrified to,” she told Marin-Gest at the time. “I didn’t want to accept the nomination but now I feel proud of myself for being able to do this, and my kid told me, ‘Mom, good job. I’m proud of you,’ and it was the most amazing moment.”

Moments like these reveal just how much deeper than a label on a bag of coffee or sweatshirt Fair Trade USA’s work goes. When we hear “fair trade,” it’s easy to simply acknowledge that a label like that ensures ethical practices and fair business, but the actual work of Fair Trade USA is much more intricate and weighty than that.

Fair Trade USA helps develop sustainable supply chains by setting rigorous social and environmental standards that farms, factories and fisheries around the world are certified against by third-party certification bodies. To achieve Fair Trade certification, Fair Trade USA has developed detailed certification criteria for the different product categories, like the Agriculture Production Standard (APS), which is more than 100 pages long. These standards set basic principles in each workplace like eliminating workplace discrimination, requiring equal pay for equal work, as well as ensuring that workers make at least minimum wage or above. These standards also include criteria around maternity leave for women and ensure that employers cannot force women to take pregnancy tests before they are hired, which is a practice unfortunately common on many farms that do not want to take on the supposed burden of hiring a woman who will need to leave to give birth.

The certifications and audits are really just the beginning of the work Fair Trade does with its members. As Marin-Gest puts it, “we provide a platform for farms, factories, fisheries to be able to integrate social compliance into their own program to write a framework...essentially helping to tie compliance and operations back to the human, in particular.”

Besides the impact created from compliance with the Fair Trade Standards, when products are sold with the Fair Trade Certified™ seal, a few extra cents go back to the workers and small producers. These Fair Trade Community Development Funds are pooled and used collectively on projects that help meet the needs of those within the scope of the certificate. In order to manage the funds appropriately and represent all participants, the APS has an Empowerment module that requires the formation of a Fair Trade Committee. Fair Trade USA requires its partners to map their workforce and see who actually works for the company in order to ensure that the Fair Trade Committee is made up of a group of people that actually represents

**Photo:** James A. Rodriguez/Fair Trade USA
the workforce (number of men or women, migrants or locals, or those with disabilities, job type, etc.). The general assembly of small farmers or workers then elects the committee members. A needs assessment of all the small farmers or workers (on large farms) is conducted to direct the decisions on how to use the Fair Trade Community Development Funds. The Fair Trade Committee then develops projects based on the needs of the general assembly members, their families and communities. Projects focus on helping to solve community problems and make work more accessible, particularly for women.

In Ecuador, women working on a floral farm that was Fair Trade Certified began to get sick. The women were working six days a week, and on Sundays, their only day off, women would go into the river to wash their family’s clothes. The high-altitude river was getting contaminated, and women were having bone and respiratory problems.

After the Fair Trade Committee at the farm looked deeply at the root causes of why so many women were getting sick, they decided to use their Fair Trade Community Development Funds to create a laundromat, employing an attendant to do the laundry, on-site at their farm. Women can now bring their family’s laundry to work and leave at the end of the day with clean, folded laundry. Suddenly, women actually had a day to rest at the end of a long workweek and were much healthier. Marin-Gest said that small innovation led to some women finishing up school or starting their own businesses.

“People also care how they’re being treated and if they have a voice on that farm, so what we’ve found with the Fair Trade program is that farms have gone from having extreme labor shortages to having waiting lists of workers who want to work there,” Marin-Gest said.

This makes sense with a model that encourages workers to not only have better lives but also re-invest their Fair Trade Community Development Funds into programs that are good for the community. Marin-Gest pointed to examples like women creating their own sewing design shops or pig nurseries with the Community Development Funds, or building homes and communities near to farms, to eliminate commute stress or family separation. Fair Trade USA also provides financial literacy training, which really helps families plan their financial lives, as well.

Beyond fair, humane working conditions for workers around the world, Fair Trade USA is also helping empower women and their families to advocate for their rights and work to have more financially stable and secure lives in the future. Or as Marin-Gest puts it, looking at women like Fabiola and her child, “generations are getting impacted, as well.”
GOALMAKER PRONTO International

Heidi Breeze-Harris believes clinical providers are key to saving lives in childbirth

By Angelia Miranda

For Heidi Breeze-Harris, executive director of PRONTO International, working in the global health sector may not have been an obvious path, but in retrospect, it makes sense. Thanks to the trips that she and her mother saved up for every summer, and growing up with a diverse extended family, Breeze-Harris has always had a strong connection to the international sector. “Because I started traveling to pretty out of the way places when I was young, I was comfortable in those settings,” she says.

But what she saw within those settings didn’t always make sense.

One of the greatest influences in her life, her grandfather, instilled in her a lesson as a child. “He taught me that there is nobody lesser than me, and nobody better. We are all the same level of human.” Breeze-Harris internalized his words, but the inequality and injustice she saw during her travels made her wonder how they could be true when reality looked so different.

“My grandfather instilled this belief and then I went into the world.” As a 5-year-old child in Lima, she recalls asking herself, “How do I get to eat breakfast and these other children my age don’t. Why can’t they have what I have? And is it wrong that I do?”

Upon finishing college with a degree in anthropology and Asian studies, Breeze-Harris considered looking for international work. “I also loved, and love art and I thought what better time to experiment with work in the arts than when I am young and have little to lose.” A conceptual artist, she has embraced music, acting, sculpting, photography, and painting. In fact, her first job was with local glass sculptor and artist, Dale Chihuly. “I started as a receptionist with Dale and worked my way up,” she says.

Obstetric fistula is a childbirth injury caused most often by women experiencing obstructed labor without access to timely medical care. An estimated 2 million women worldwide suffer from fistula.

With long hours and dedication, within six months Breeze-Harris became Chihuly’s book designer and museum liaison, and she worked with the installation design teams in the studio. After six years, she shifted her focus from art to urban design in service to community development.

After working as an urban designer for low-income communities, Breeze-Harris received a fellowship in 2003 to work with immigrant communities in Kobe, Japan, who had been displaced and disenfranchised after the Hanshin Awaji earthquake. It was after returning from Japan that she first heard about the medical condition, fistula.

Obstetric fistula is a childbirth injury caused most often by women experiencing obstructed labor without access to timely medical care. In obstructed labor the baby’s head puts pressure on the mother’s birth canal, which if left unrelieved can result in a stillborn baby and the mother with a hole in her bladder or rectum. An estimated 2 million women worldwide suffer from fistula. Because women with fistula can leak urine and and/or feces chronically, they often face ostracism, isolation, shame, and a heightened risk of death.

Breeze-Harris was herself one month pregnant when she began learning about fistula. It went from being a topic completely unknown to her to suddenly showing up in her life three times in one week. “I think that’s a sign that something’s worth paying attention to,” she said. And so she did.

Together with her friend, Katya Matanovic, she co-founded the organization, One By One, to work with women in East Africa and implement a holistic approach to fistula treatment and prevention. She learned more about fistula and its impact on girls and women in low-income countries. In an ironic twist, her own pregnancy took a turn for the worse, and Breeze-Harris almost died from obstructed labor.

“Because I lived in the U.S.,” she explained, “I was able to have a cesarean section in time.” Once again, the questions raised by her grandfather’s lessons seemed to apply; only this time the difference between her and others like her was access to life-saving resources.

Breeze-Harris never intended to start an organization like One By One. As a new mother, she fully expected to hand the project off to the UN Foundation. “I had my own child;” she points out. But the UN Foundation gave One By One a startup grant and encouraged them to keep going.
After 11 years, she left One By One, in need of a chance to recharge. But the work she started continued on. In 2018, she watched with pride as One By One merged with the Worldwide Fistula Fund, a Global Washington member. “I am so thrilled the work continues. That’s what’s happening, and it is happening in an even bigger and better way than either organization would have been able to do alone.”

On the flipside, the team One By One helped to build in Kenya now operates and functions as its own NGO. “The leadership is theirs,” she affirmed. Looking back at all that One By One has accomplished since she left, she says, “To say I’m proud is a weird way to put it—I’m humbled that I was able to connect and work alongside incredible leaders who made all of this happen. This work is led by fistula survivors there. That is how it should be.”

Breeze-Harris continues her work in global and maternal health as the current executive director of PRONTO International, an organization that provides innovative low-cost obstetric training to clinical providers in resource-limited settings around the world.

The philosophy that PRONTO International embodies is the idea that clinicians are not separate from mothers and babies—rather, they are an essential part of the childbirth process and the “mother-baby-provider” triad. As such, the organization focuses on offering clinical providers the emotional, psychological, and technical support they need not only for the safety of mothers and children, but also for their own well-being, because confident providers save lives.

When asked about her confidence in the global community’s ability to accomplish the Sustainable Development Goals relating to global health by 2030, she expressed a general sense of optimism. At the same time, she cautioned that the global community must not forget all those encompassed by the term “global.” For instance, the United States is the only developed nation where rates of maternal death are increasing, especially in populations of women of color.

“**It is important that we highlight the relationship between our healthcare system, racism and pregnancy outcomes,**” she said.

While PRONTO International works in low-resource areas across the globe, it also sells birth simulation kits to American providers and universities. PRONTOPacks™ allow clinicians in any setting to simulate birth in a highly realistic and innovative, yet sustainable, low-tech and low-cost manner.

In pursuing innovative ways to train birth attendants, from offering PRONTOPacks™ to developing curriculum and training plans in collaboration with local governments, PRONTO International aims to develop practitioner skills in-country, while ultimately placing the responsibility of continuing the programs with the countries themselves. “Our goal has to be to make it sustainable within country budgets and staffing systems.”

Tracing a path from the office of an artist to the forefront of innovative organizations in global health and maternal care was certainly never the plan. But if there is one thing Breeze-Harris illustrates, it is following her passion wherever it may lead.

Today, Heidi Breeze-Harris brings her creativity to the role of changing the very inequality and injustice that she witnessed in the world as a child. By ensuring that future mothers can get what they need, regardless of where or who they are, she helps to make her grandfather’s words a reality: nobody less, and nobody better.

The philosophy that PRONTO International embodies is the idea that clinicians are not separate from mothers and babies—rather, they are an essential part of the childbirth process and the “mother-baby-provider” triad.
In most parts of the U.S., we don’t think twice about turning on the faucet or hopping in the shower. With infrastructure in place, it’s incredibly easy to forget that public utilities, engineering, and coordination enable access to fresh water for millions of Americans every day. But this kind of infrastructure is expensive to build and maintain, especially in parts of the world where governments are just beginning to prioritize water for their people.

Worldwide, 844 million people do not have access to clean water, UNICEF estimates. WaterAid, a global non-profit is working to change this.

Established in 1981 by members of the U.K. water industry, WaterAid works to close the gap globally on access to clean drinking water, sanitation, and hygiene (referred to as “WASH” for short). The organization is now bringing water resources to communities in 28 countries, on three different continents.

“The emphasis was really on water supply in the early days, then coming on to sanitation and how to do that effectively, and now hygiene is a big focus, so it’s an integrated approach,” said Vincent Casey, WaterAid senior manager for water, sanitation and hygiene.

Access to clean water, sanitation, and hygiene is crucial not only for daily life but also for health. Every two minutes, diarrhea caused by dirty water or poor toilets kills a child under five years old. Casey says this is why WaterAid also focuses on toilets and hygiene practices in the communities where it works. Clean water alone does not impact the disease burden that exposed human waste can have on a community.

WaterAid has staff in 34 countries, including those where advocacy and fundraising work happen, like in the U.S. and the U.K.

A large part of the WaterAid model is ensuring that local and national governments recognize the crucial needs of their people for access to clean water. Casey said WaterAid works at all levels of government, from local communities to national policymakers.

“We work a lot with districts or local governments, so operation-wise not only the delivery of WASH but how you keep those benefits in place,” Casey said.

In other words, helping create national or district-level policies is important, but not sufficient. WaterAid also works with other NGOs and education and health advocacy organizations to ensure that they are including education about handwashing, good hygiene and sanitation practices. Each in-country WaterAid team works to influence policy, and sometimes directly implements water initiatives, as well.

Back in the 1990s, WaterAid helped introduce gravity-fed water schemes for large communities with thousands of people to get water. In each case, the organization created a structure to govern the new utilities. Casey used WaterAid’s work in Ethiopia, which began in the 1990s, as an example. After a management arrangement for a local water utility is recognized by the national government, this type of multi-village model can become a reality.

“That’s literally all the villages nominating someone to a board, and that board appointing an executive board to run the scheme, and then that executive board contracts...
mechanics and people who do financial management and revenue collection,” Casey said.

WaterAid evaluated these types of management models in Ethiopia over several decades, and the most recent evaluation from 2018 shows that they are still performing really well, Casey said. Such large-scale gravity-fed water schemes usually supply water from higher ground springs to lower ground areas. There are no pumps or complex equipment to maintain, making it an easier model to establish.

Not all of the countries where WaterAid works can support these types of models, especially in rural areas where water is difficult to access underground, or may be contaminated with arsenic or high salinity. In these places, financial stability and investment are necessary. This is where political advocacy comes in. “You have to be working to push government to take up its responsibility to ensure that everyone has access to these basic things. Governments are responsible for making sure that happens,” Casey said. “(In some countries) they’re not doing it and not delivering on it, and they need to. That needs a push not only from civil society but from individuals themselves, to demand better services.”

Part of WaterAid’s work is connecting water utilities and private companies with community water associations established in the countries where they work. These relationships are not just for financial support, but also to share best practices for sustainability of services. “A good utility has to be able to have good cost recovery, a good billing system, and good revenue collection processes,” Casey said.

Those partnerships also support new water associations with challenges like reducing water lost due to infrastructure and figuring out how to improve efficiency.

While WaterAid helps find financing and investment for local utilities in the countries where it works, the organization also encourages governments to invest even more. Casey said leveraging government investment has worked in some countries, including Ethiopia.

At its best, WaterAid’s model enables the non-profit to leave a country entirely. Casey said this is how the process is supposed to work if the job is done correctly. The key, he said, is establishing water utilities as professionalized services.

“It’s not just about building infrastructure, training a few people then walking away; it has to be a formal management model, which is legally recognized in the country and supported nationally,” he said. “And the problem is with a lack of resources, there may be legally recognized management models, but they’re not supported. So, they rely on various donor initiatives to provide the backup support to subsidize major maintenance.”

Ultimately and ideally, WaterAid wants to create a sustainable model for delivering water to communities with reliable funding sources before it leaves. Casey said the current challenge is in places where communities do have access to WASH, but suffer from very poor levels of service. “People may have access on paper or be within proximity of a water supply installation, but the level of service provided isn’t necessarily very high,” he said. “It’s like a hidden crisis of poor service, poor water quality, long periods of service outage, long periods of service breakdown. It’s not simply a problem of lack of access—it’s beyond that.”

WaterAid has U.S. offices in New York and Washington, D.C., with remote-based staff throughout the country, including in Seattle.
For Alejandro Grajal, conservation efforts begin and end with humans

By Arielle Dreher

While politicians and celebrities alike routinely rally communities to save the planet, other not-as-obvious, yet incredibly influential forces are already at work: zoos.

Alejandro Grajal, President and CEO of Woodland Park Zoo, knows a thing or two about how zoos can play a role in large-scale conservation efforts. He was in graduate school, finishing a PhD in zoology from the University of Florida, during the conservation biology movement of the 1980s, and he has been invested in its progress and impacts ever since. Grajal, the current CEO and President of the Woodland Park Zoo, believes that conservation efforts ultimately begin and end with humans.

“One of the things that has been pretty evident to me from the very beginning is that even though conservation or wildlife conservation is a biological problem, the causes and the solutions are human because extinction and habitat loss and so on are created by humans, but also can be solved by humans,” he said.

Conservation has been at the heart of Grajal’s studies and his professional career. He came to the Woodland Park Zoo in 2016 after beginning his professional life at the Wildlife Conservation Society in New York (which runs the Bronx Zoo) and then leading the Center for Conservation Leadership at the Chicago Zoological Society. He has specialized primarily in field conservation, meaning protecting large areas of habitat and land, primarily in Latin America and the Caribbean. He has also published numerous articles and conducted research on conservation for most of his career.

Zoos play a vital role in conservation efforts globally. Grajal’s work not only at the Woodland Park Zoo but also as a board member for the Association of Zoos and Aquariums (AZA), which accredits all zoos and aquariums in North America and abroad, is conservation-focused. In fact, Grajal says they are the second largest source of funding to international conservation efforts worldwide. According to the AZA, the 230 zoos and aquariums in the association have donated over $1 billion in funds to field conservation in the past five years.

About 8 percent of the zoo’s annual budget is spent on international conservation, Grajal said. The Woodland Park Zoo has nearly 20 conservation flagship projects that involve multi-decade investments in field conservation in places as far away as Papua New Guinea and as close as the North Cascades.

In addition to investment, which Grajal says is the most significant way zoos play a role in conservation, they also literally play a role in conserving species. Endangered species, or animals that are in danger of going extinct, are often preserved as a result of zoos and aquariums taking in those animals. Grajal explained that this process is vital to the species’ survival. For example, the Woodland Park Zoo currently has three Malayan tigers. There are only about 200 of these tigers left on earth, and the majority of those left are in zoos. With fewer than 100 wild Malayan tigers, the ones living in zoos might be the last surviving animals of their kind in a few years.

“The population in zoos and aquariums right now is radically valuable to keep the genetic makeup of the population for the future, because the population in the wild is not thriving,” Grajal said.

The Woodland Park Zoo is AZA-accredited, meaning it could also hold or keep species protected in the association’s program SAFE (Saving Animals From Extinction). SAFE is a global strategy to ensure that endangered species are protected, Grajal said. There are currently 30 SAFE action plans for species, with more in the works.

Conservation efforts taken by outside organizations and even zoos in the U.S. are, in the end, only drops in the bucket, and Grajal recognizes this. And yet, sociological and psychological research conducted at the Woodland Park Zoo to evaluate the visitor experience has led to interesting findings.

“We know for sure that one of the critical elements of the zoo visit is that people have this flow of positive emotions,” Grajal said.

This is in part due to the connections with animals, as well as visiting with loved ones, Grajal said.

“The combination of really strong social brainwork for the visit and the emotions that are driven by the zoo really drive an unusual combination of willingness to act,” Grajal said.

The question is how to turn that positive emotion into action. Or as Grajal says, “How do we get those emotions supercharged so we can drive people towards pro-environmental behaviors?”

While the science and research at Woodland Park Zoo shows the zoo visit can lead to a powerful emotive experience, visiting the zoo only lasts four to five hours at most. To keep that positive emotive experience, Grajal said, the
zoo’s social media investment aims to create more opportunities for people to engage in conservation.

The organization currently has 54,500 followers on Instagram and more than 32 million views on its Youtube channel. In addition, its website address is literally zoo.org, which doesn’t hurt the organization’s online search rankings.

Ultimately, Grajal said all this content points to what needs to happen to actually conserve the planet and our shared environment: consumers changing their behaviors.

“We try to keep the fun and family and hopeful message of coming to the zoo, while at the same time creating opportunities for people to engage in conservation, mostly by taking specific consumer positions such as composting, recycling or buying sustainable seafood products, or eliminating single-use plastics from your life,” Grajal said.

The zoo can leverage its substantial social media following when the environment is threatened by policy proposals, as well. For example, The Woodland Park Zoo sent more than 10,000 signatures as a part of a petition to Congress when the Trump Administration attempted to change the Endangered Species Act. Grajal expects to grow the zoo’s role as part of a larger social movement towards conservation.

“I believe that one of the challenges we face in terms of conservation is the support of the public, regardless of their political ideology or their socioeconomic status. It’s been for a while that conservation has kind of morphed into or been pigeon-holed into this kind of white, middle class values ideal, but the reality is that conservation and the conservation of wildlife affects everybody, rich and poor, different cultures, different languages,” he said.

By engaging zoo visitors and contributing to a wider social movement towards conservation, the zoo also plans to continue to measure its impact and see if social responsibility grows. Ultimately, the health and survival of all is at stake.

“It’s really important that people understand that their actions and everyday decisions have global implications,” Grajal said. “And all those things (like eliminating single-use plastic) look very flimsy, very small when you do them by yourself, but the reality is that if you get millions joining it, you have a significant impact. You drive corporations and businesses to make responsible decisions, and then we have positive feedback in which both consumers and providers and policy all move in the right direction.”
Ending child marriage begins by keeping girls in school

By Joanne Lu

Salma is a preschool teacher in rural Bangladesh. She’s a high-school graduate and plans to continue her education in college. In a country where an estimated 45 percent of girls drop out of secondary school, Salma is a big deal.

But just four years ago, at 14 years of age, Salma was among millions of girls who live in absolute fear of being forced into marriage, likely to an older man. As a girl from a poor family in Bangladesh, which has the fourth highest rate of child marriage in the world, according to UNICEF, and the second highest number of child brides—nearly 4.5 million in 2017—Salma was staring down the barrel of child marriage.

That is, until she received a scholarship from World Concern to stay in school. The UN Population Fund says that girls who have a secondary education are up to six times less likely to be married off before their 18th birthday. That’s why World Concern believes the solution is to keep girls in school, especially when their families can’t afford it.

The scholarship is just one component of World Concern’s holistic approach to what it calls “transformational development” in the world’s poorest and hardest-to-reach places.

Over its 65-year history, World Concern has refined the ways it addresses not just physical and economic needs, but emotional and spiritual, as well—taking into account the whole person.

“We believe that every human being is created in the image of God,” says Cathy Herholdt, World Concern’s senior communications director. “Every human being deserves to have their basic needs met and have an abundant life. That faith is what drives us; it’s why we do what we do.”

That belief also guides the organization’s transformational development approach, in which communities take charge of their own development. Instead of a top-down approach, World Concern works alongside communities to identify their greatest needs, their greatest assets, and how they want to improve. It’s also why 95 percent of World Concern’s staff are nationals from the 15 countries in which they work across South and Southeast Asia, East Africa, Haiti, and the Middle East.

Herholdt says that over the 30 years that World Concern has worked in Bangladesh, they’ve seen how child marriage is a “scourge” that’s keeps people trapped in a cycle of poverty and causes extreme physical and emotional harm to young girls.

“Literally, they’re terrified,” Herholdt says about the girls she has interviewed.

Often the girls’ mothers were themselves married as children, and they talk about how it took all their choice and freedom away. They don’t want that life for their daughters, but in a male-dominated society, where spending even $50 to $100 a year to send a child to school is too costly for a family earning a dollar a day, parents often feel like they have no choice.

World Concern’s scholarships give families the choice to keep their daughters in school until they’re past the age of forced marriage and to break the cycle of poverty by setting them up for better jobs and futures.

The effects are spreading beyond families into entire communities. For example, World Concern is helping women’s groups (or “federations,” as they call themselves) learn about the impacts of child marriage, why it’s better for girls to be in school, how to prevent child marriage and how to spread that message.
These women are banding together to form a powerful voice and actually effect change from within their communities. When they hear that a family is considering marrying off their young daughter, if just one of them goes to confront the father, it often doesn’t go well and can even be dangerous. But when they all go together to come alongside the family and share why it’s a bad idea and that there are better options, they say they’re often successful in stopping the child marriage.

“It’s coming from within the community,” says Herholdt. “It’s a very powerful thing to see.”

As daughters watch their mothers step up to protect them and each other, girls are also finding ways to replicate that empowerment through youth health and hygiene clubs and other group support systems. Boys are also watching their sisters excel in school, while their mothers run businesses and become community leaders. This, says Herholdt, is how culture changes holistically.

At the moment, World Concern’s child marriage program is primarily in Bangladesh as well as a few other countries, like Kenya, Chad and Somalia, where the issue is prevalent. But Herholdt says they’re excited to continue expanding their transformational development work into new areas that are the hardest places right now, including Syria, Yemen, and South Sudan.

““We’re moving away from one-off sectors and focusing on how and where we can have greater impact with our holistic approach,”” says Herholdt.

““We’re letting that drive who we are and how we do our work.””

World Concern’s scholarships give families the choice to keep their daughters in school until they’re past the age of forced marriage and to break the cycle of poverty by setting them up for better jobs and futures.
World Vision sees work in 'fragile contexts' as necessary to accelerate SDGs

By Joanne Lu

Since 1950, when World Vision launched its operations by helping orphans and children in North Korea, many of the Federal Way-based organization’s key moments have been shaped by refugees and fragile states. Now, nearly 70 years later, the organization is honing in on that need with a new global strategy. It’s called Our Promise 2030, and it brings together World Vision’s many decades of experience, resources and programs to better help children and communities in the hardest places in order to accelerate progress toward the Sustainable Development Goals.

“In practice our core mission is around serving the most vulnerable children and the poorest,” says Jonathan Papoulidis, World Vision Executive Advisor on Fragile States. “We’re seeing that fragility is really the center of the global development crisis right now.”

The Organisation for Economic Co-operation and Development (OECD) estimates that by 2030, about 80 percent of the world’s extreme poor will live in fragile states. Currently, the OECD lists 58 countries as “fragile contexts.” World Vision works in 38 of them and has long-term development programs in 24. In total, the organization, which is one of the world’s largest non-governmental aid agencies, works in nearly 100 countries.

“Thirty years ago or so, there were lots of different countries struggling with extreme poverty and disaster and conflict,” says Papoulidis. “We’ve seen global progress across the board in many of these places, except in these really fragile ones.”

Even the global refugee crisis, Papoulidis points out, is a symptom of fragility. “We tend to put them in different buckets, but the vast majority of refugees come from fragile states. And the vast majority of them seek refuge in neighboring countries that are dealing with higher levels of fragility, as well.”

As World Vision has remained focused on a broad mission to help vulnerable children and communities at home or on the move, their experience and data has led them to work in fragile states for more than three decades.

“Now we’re saying we’ve got to get a lot more focused in these spaces where ‘business as usual’ development is just not working,” says Papoulidis. “We need a whole different approach to being more impactful and being able to support and empower more communities in these fragile places.”

Through its vast humanitarian and development operations, as well as its advocacy and policy work, World Vision is trying to promote a paradigm shift that considers the larger picture from the get-go. It includes recognizing that conflict is only one piece of the fragility puzzle, along with poverty, grievances and high vulnerability to natural disasters, pandemics and global price shocks.

“What we see now are some very promising thinking and trends in the development space, but we don’t see them fully fleshed out yet, and we don’t see them combined into a paradigm or a package where they’re working together,” says Papoulidis.

For example, development agencies are working hard to build resilience in food security, disaster risk reduction and climate adaptation. But Papoulidis says that resilience efforts are being “stove-piped” into these sectors instead of being applied to the complex interacting risks and crises in fragile states.
“There's a great need to de-silo this thing and get it into a much broader systems approach that considers political, economic, environmental, social and security factors,” he says.

For example, World Vision is part of a consortium of seven aid agencies called the Somalia Resilience Programme. It provides families across the country with multiple livelihood options to increase their food security and ability to withstand natural shocks. But through local associations and savings groups, it also helps build social capital, which World Vision has identified as a key driver to strengthening resilience to multiple risks in fragile contexts.

“Social capital—the networks, values and norms for cooperating across different boundaries—is really the deficit of fragile states,” says Papoulidis. “If the social contract is broken, that’s when you get low resilience and societal dysfunction.”

It’s important, according to Papoulidis, to build social capital along three tracks: bonding, bridging, and linking. Bonding is strengthening cooperation within communities that already share common ties like worldview, ethnicity, and boundaries. Bridging is building reciprocity—even trust—between communities that are disconnected or even divided with tensions. This could include mediating between ethnic groups that are at odds with each other or supporting regional hospitals that bring together different communities. Linking is connecting communities to formal institutions like governments and formal banking. Building social capital along just one or two of these tracks could actually deepen division, inequality, or exclusion.

In the context of refugees, for example, this includes building cooperation within refugee camps or connecting them with host communities, connecting them with the broader community surrounding refugees, as well as working with the government to provide solutions that are not only for refugees but also for others who are disenfranchised.

“Having the lens of knowing you’re trying to do all three things at once—bonding, bridging, linking—helps figure out where you’re trying to go as opposed to just doing limited work in one dimension,” says Papoulidis.

That larger perspective doesn’t just guide World Vision’s efforts to build social capital. It’s helping to inform their emerging approach to scaling and adapting programs for new contexts as well.

“If you're going to do social capital strengthening, you can only do it at scale, because you've got to do bonding with a large group of communities, but also bridging across wide geographic areas, and linking to cross-vertical levels of government,” says Papoulidis.

Instead of starting with projects—which may seem less risky—Papoulidis says the development industry needs to start with a scaling model. Instead of only building wells, the question is how can we transform a water system?

“Scaling in fragile states is actually less risky than small projects,” he says, because it makes you think through all the systems that enable something to work in a specific context. Do you have political support for this? Is social empowerment and support a core feature? What does your financing look like over the next 10 to 15 years? The foresight it provides, he says, allows you to pull together and adapt different resources, partners, projects, and capacities to reach your goal.

“You can also get to some of the root causes of fragility, because you're able to help change patterns of cooperation and inclusion at a really large level,” he argues.

That’s how World Vision arrived at Our Promise 2030. Their goal to lift up the world’s most vulnerable children and communities led them to pull all their resources and capacities together with a key focus on fragile contexts. This means continuing some existing initiatives, re-scoping some programs, while determining which others are no longer essential. It also means launching pilot initiatives in the coming year in several fragile contexts.

“It can be done adaptively to contexts? Can it be done at scale? Can it be done in a coordinated and cooperative way with multiple stakeholders at different levels?” asks Papoulidis. “If we can do that—even though getting out of fragility is a long-term, multigenerational, extremely difficult, often contested and violent process—this approach can do so much to accelerate it.”
3RD CREEK FOUNDATION ●
3rd Creek Foundation is a private family foundation focused on global poverty alleviation through grant-making and impact investing. More specifically, the foundation supports early stage programs that create sustained economic opportunity and dignity for the ultra poor.
PO Box 5406
